

SHWETA SHARMA

PROFESSIONAL SUMMARY:

- Results-driven Senior Software Engineer with 5+ years of experience, relevant expertise in designing and scaling enterprise-grade backend systems across banking, financial services, e-procurement, and SaaS domains.
- Proficient in Java 8, Spring Boot, REST APIs, microservices, Apache Kafka, AWS, SQL, and CI/CD automation, delivering robust and secure backend solutions.
- Strong track record in building real-time, event-driven architectures that enhance transaction reliability, reduce latency, and support high-volume operations.
- Specialized in backend architecture, API design, microservices development, event streaming, observability, secure-by-design applications, database optimization, and DevOps practices.
- Successfully delivered large-scale, high-impact systems ensuring operational efficiency, regulatory compliance, and superior user experience.
- Experienced in mentoring and leading teams, establishing coding standards, conducting code reviews, and fostering high-performing engineering cultures.
- At FIS Global, led development and enhancement of HORIZON, a core banking platform used by 3,000+ professionals across North America, improving system performance and reliability.
- Expertise in fault-tolerant Kafka pipelines, resilient microservices, and optimized database interactions, driving agile delivery and accelerating project timelines.

TECHNICAL SKILLS:

Languages:	Java8
Technologies:	Programming & Frameworks: Java 8, REST APIs, Spring Boot, Spring Core, Spring MVC, Spring Data JPA, Spring Security Event Streaming & Cloud: Apache Kafka, Microservices, AWS Databases: SQL (query optimization, data modelling, transactions) Development Tools & Collaboration: JIRA, Rally, Bitbucket, GitHub, Eclipse.
Database:	RDBMS, Oracle, MySQL
Tools:	Jenkins/JIRA
Operating System:	Windows
Frontend Technology :	Angular8

Professional Experiences:

IRIS, Gurgaon	Nov 2025-Till Present
Senior Engineer- Technology	

FIS Global, Gurgaon	Feb 2022-Aug 2025
Java Developer	

1. Client - Project: RBC - US Banks – HORIZON

Description of the project: At FIS Global, I lead the development and enhancement of HORIZON, a core-banking platform used by 3,000+ professionals across North America. I have worked with resilient microservices, implemented fault-tolerant Kafka pipelines, and optimized database interactions, resulting in high system performance, reliability, and compliance. I work closely with stakeholders to translate requirements into technical solutions, drive Agile delivery, and mentor team members, improving code quality and accelerating project timelines.

Business Domain/Function: Banking/Financial

Environment/Technology Stack: Java8, SpringBoot, IDE:Eclipse, VersionControl:BitBucket, Maven, Postman., Microservices, SQL.

Frontend: Angular 8, TypeScript, HTML5, CSS3

Project Role: Java developer

Responsibilities:

- Designed and enhanced HORIZON, a core-banking platform used by 3,000+ banking professionals across North America, delivering improvements across Deposits (DO), ACH, loans, card management, and transaction processing modules.
- Led API design and development, introducing versioning, validations and writing JUnit test cases coverage that significantly improved stability and reduced integration defects.
- Co-ordinated with 20 + member team within 1 month by efficiently setting up environments and conducting thorough code reviews during the initial project phase.
- Resolved 100% of client-reported issues by developing a robust API module, significantly enhancing application stability and achieving complete client satisfaction.
- Built and scaled microservices using Spring Boot/Spring MVC, applying Circuit Breaker and Retry design patterns to ensure transaction reliability and service uptime under peak load.
- Developed real-time event-driven pipelines with Kafka, optimizing partitioning and consumer groups to support seamless, fault-tolerant transaction processing.
- Collaborated with product owners and stakeholders to gather requirements, draft user stories, and deliver in agile sprints, shortening delivery cycles and improving stakeholder satisfaction.
- Optimized database interactions using JPA/Hibernate, profiling and tuning performance bottlenecks to reduce latency in high-volume financial transactions.
- Integrated backend services with Angular-based front ends via OpenAPI/Swagger contracts, improving user experience and reducing rework during development.
- Strengthened observability by implementing structured logging, metrics, and monitoring dashboards, which improved incident detection and reduced MTTR.
- Ensured secure-by-design development by implementing authentication, authorization, and secure data handling practices aligned with financial industry standards.
- Used Angular8 for the frontend development.

Artech Infosystems Private. Ltd., Noida
Software Engineer

Feb 2021-Jan 2022

1. Client - Project: IBM 's Internal Project - CSA

Description of the project: At Artech Info Systems, I contributed to IBM's Internal CSA platform, streamlining supplier request management and operational workflows. I implemented robust API testing strategies, reducing integration errors and increasing system reliability, while mentoring colleagues to enhance team productivity. Resolving bugs. Handled the client reported issues.

Business Domain/Function: e-procurement/Finance

Environment/Technology Stack: Java8, JIRA/Jenkins, Maven, Oracle, SpringBoot, IDE:Eclipse.

Project Role: Java developer

Responsibilities:

- Contributed to the development of IBM's Internal Application CSA, a critical platform for managing supplier requests (new, renewal, and referral contracts), streamlining procurement workflows and reducing cycle times.
- Designed and executed API testing strategies using Postman, which reduced integration failures and improved system reliability, resulting in a smoother user experience across stakeholders.
- Achieved 100% error-free module by collaborating closely with client care to understand and effectively resolve client-reported issues.
- Implemented containerization with Docker, standardizing deployments across environments and reducing configuration-related issues, enabling faster release cycles.

- Applied Spring Data JPA for high-performance data management, optimizing queries to improve scalability and reduce latency in large datasets.
- Collaborated with clients and cross-functional teams to capture requirements, translate them into technical deliverables, and deliver solutions that improved process efficiency and user adoption.
- Strengthened application stability by proactively identifying bottlenecks, debugging issues, and implementing fixes that reduced recurring defects.
- Enhanced team efficiency by 40% through effective mentorship and structured training, significantly improving PI planning and defect management processes in a large team environment.

Vengai Software Solutions Pvt Ltd., Hyderabad
Software Engineer

Sep 2018-Dec 2020

1. Client - Project: In House Project - Parcel Freight System

Description of the project: Earlier, at Vengai Software Solutions, I delivered end-to-end backend systems, including the Parcel Freight System and Non-Parcel Audit System, integrating security features and optimizing database interactions to ensure scalable and efficient applications. I am passionate about bridging technical depth with business outcomes—optimizing performance, improving scalability, and enabling faster, more reliable release cycles.

Business Domain/Function: Logistic

Environment/Technology Stack: Technology: Core Java, SQL. Frameworks like Spring, Jira, Bitbucket, Jenkins.

Project Role: Software Developer

Responsibilities:

- Resolved client-reported issues promptly, ensuring minimal disruption and high customer satisfaction.
- Designed and developed the Parcel Freight System, contributing to the functional design of the Non-Parcel Audit System for improved freight management.
- Enhanced operational accuracy and efficiency through optimized workflows and system improvements.
- Acquired expertise in Security as a Service, integrating robust security measures to protect sensitive data and maintain system integrity.
- Led end-to-end development of the project from scratch, ensuring alignment with business goals and client requirements.
- Collaborated with stakeholders to translate requirements into scalable technical solutions.
- Implemented fault-tolerant architecture and best practices for secure, reliable system performance.
- Wrote optimized SQL queries to improve data retrieval efficiency and overall application performance.

EDUCATION:

- **BE(CSE)** from RGPV Bhopal with CGPA as 8.5/10.
